

IN THE SPECIFICATION:

The paragraph beginning at page 3, line 10 has been changed as follows:

This object is achieved by means of a device ~~which has the features of claim 1~~
according to the invention. The device has a first at least one media line which can be
opened by a switch, a heating element associated with the media line, a temperature sensor
which detects the temperature of the medium, and a regulation circuit. The regulation circuit
is thereby connected with the temperature sensor and controls the heating element in
dependence upon the sensor signals, as is already known from DE 39 01 198 A1.

The paragraph beginning at page 4, line 13 has been deleted as follows:

~~Further developments of the invention are the subject of subclaims.~~
